CDIS Practical 2

2520030035

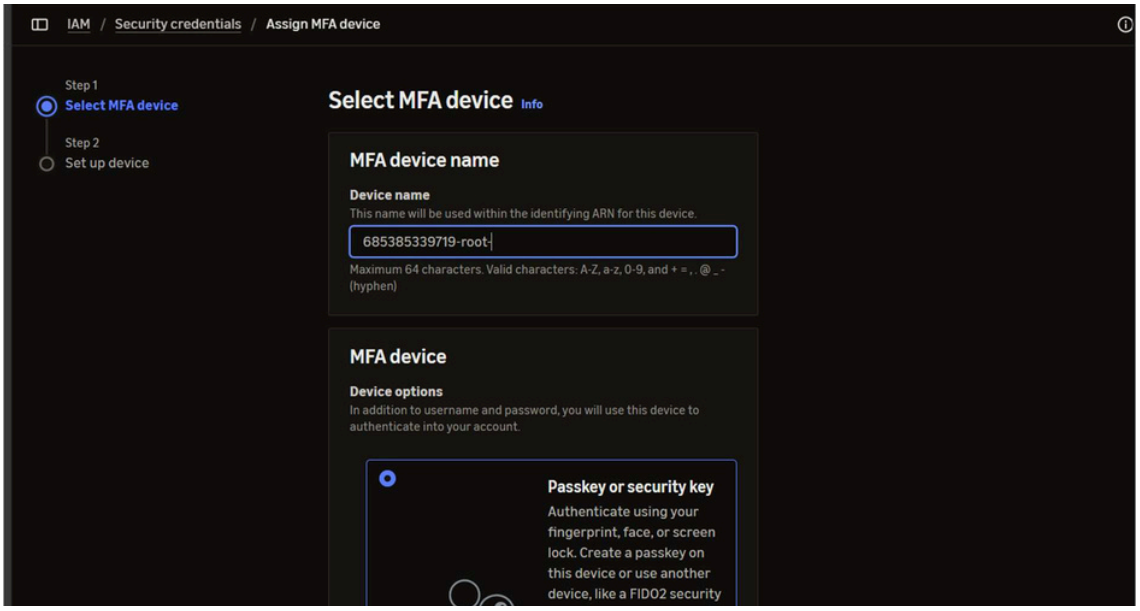

2a)Enabling Multi-Factor Authentication to Secure Your Access

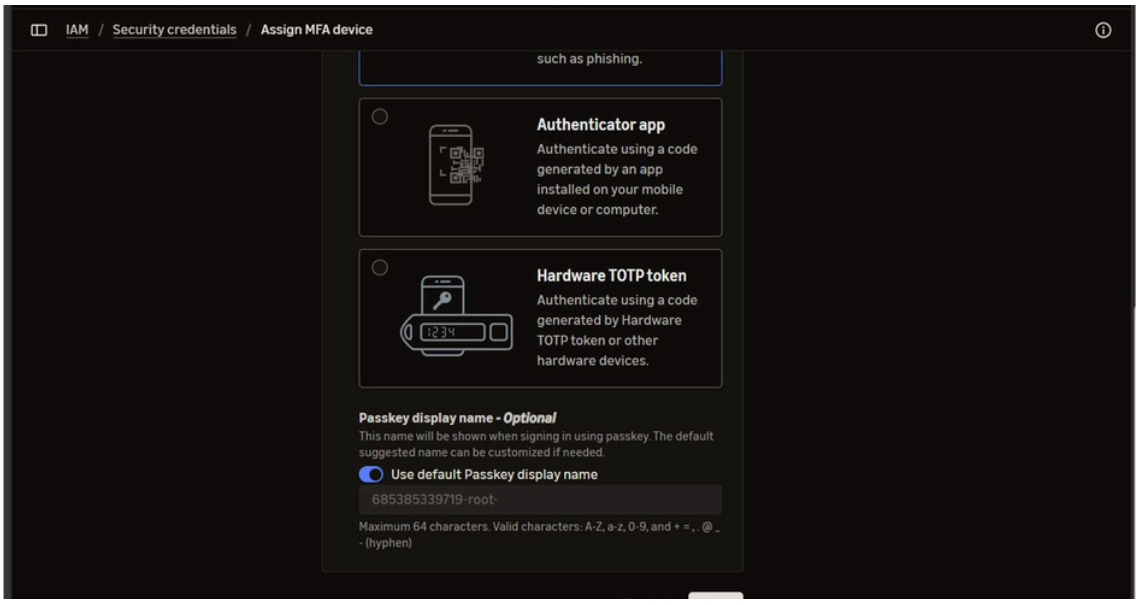

IAM Dashboard: Navigating to the AWS Identity and Access Management (IAM) dashboard, showing the security recommendation to add MFA for the root user.

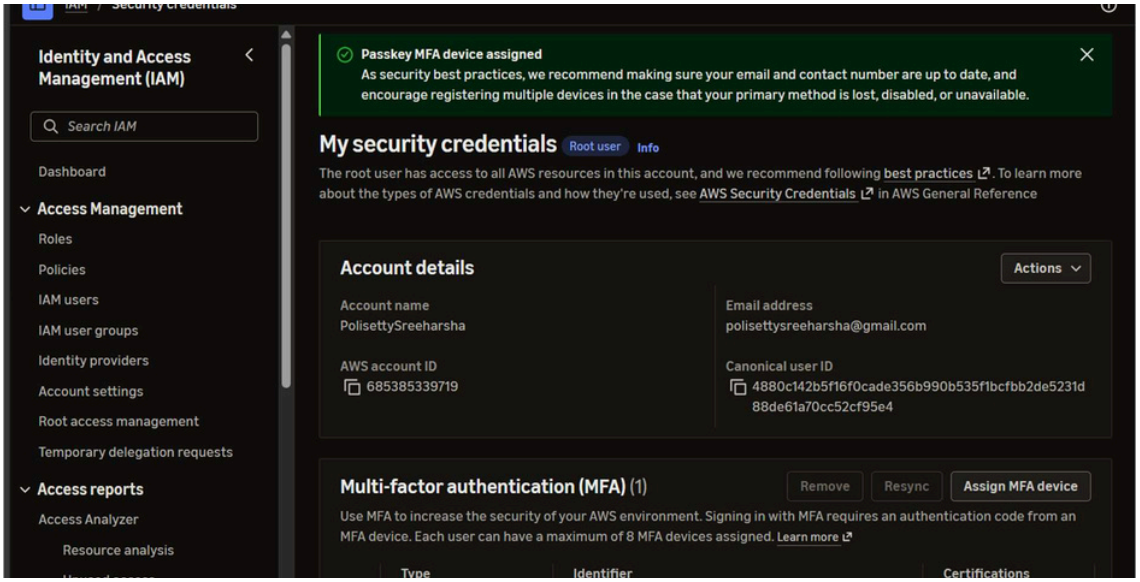

My Security Credentials: Opening the root user's security credentials page to assign a new MFA device.

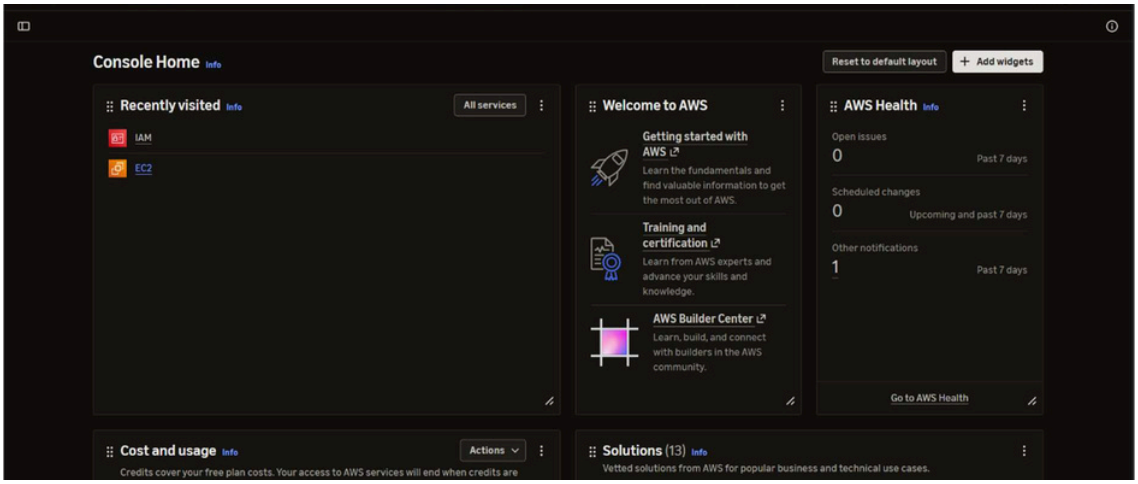

MFA Device Options (Passkey Display Name): Reviewing the available MFA methods (Authenticator app, Hardware TOTP token) and confirming the default passkey display name.

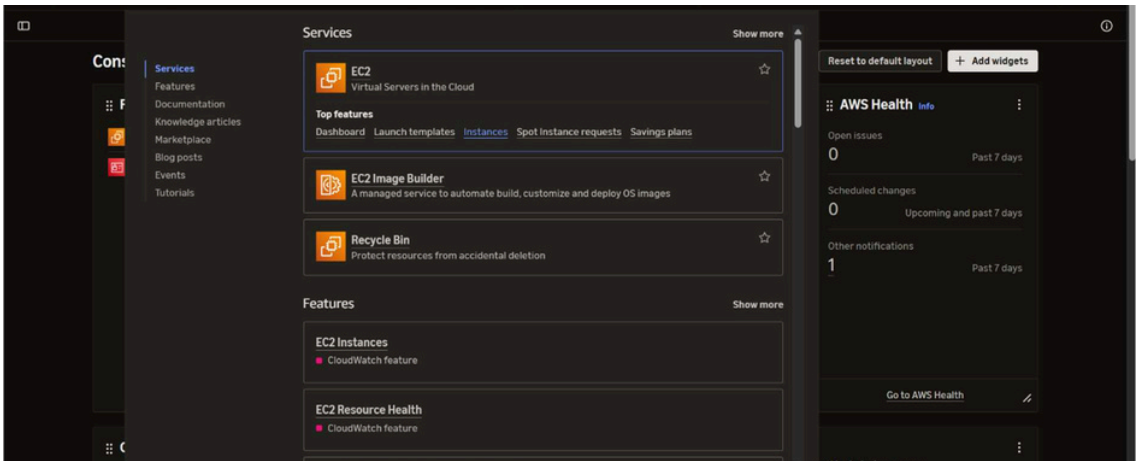

MFA Assigned Confirmation: Confirming that the Passkey MFA device has been successfully assigned to the root user account.

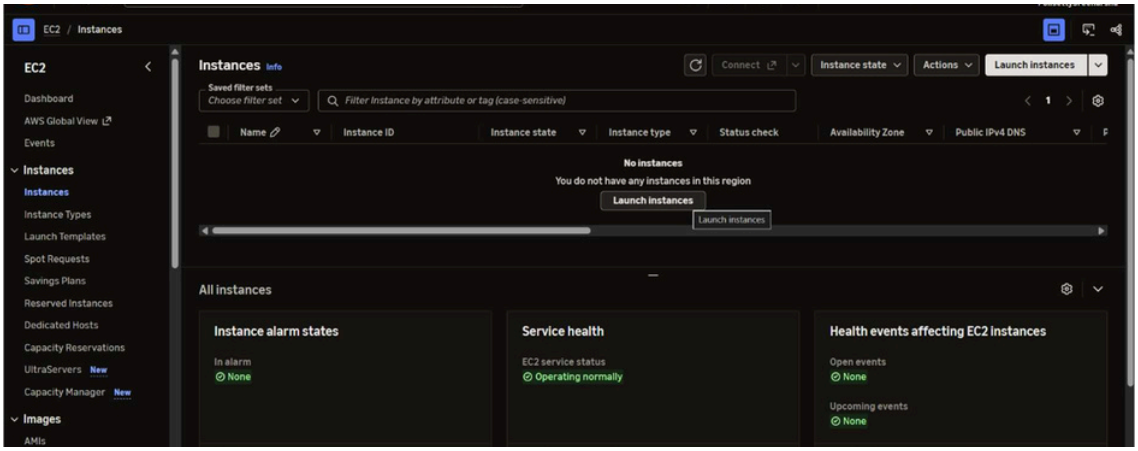

2b) Creating First Linux Instance

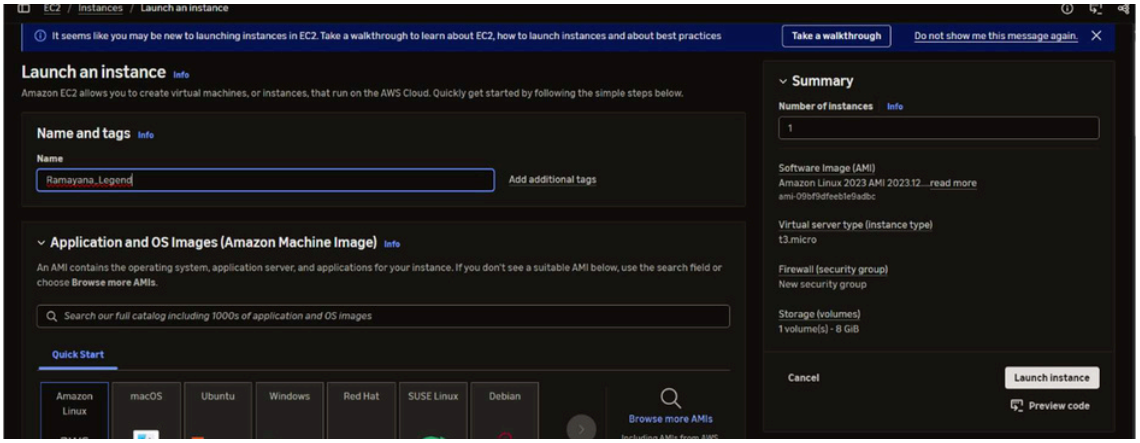

AWS Console Home: Starting from the AWS Management Console home screen to access compute services

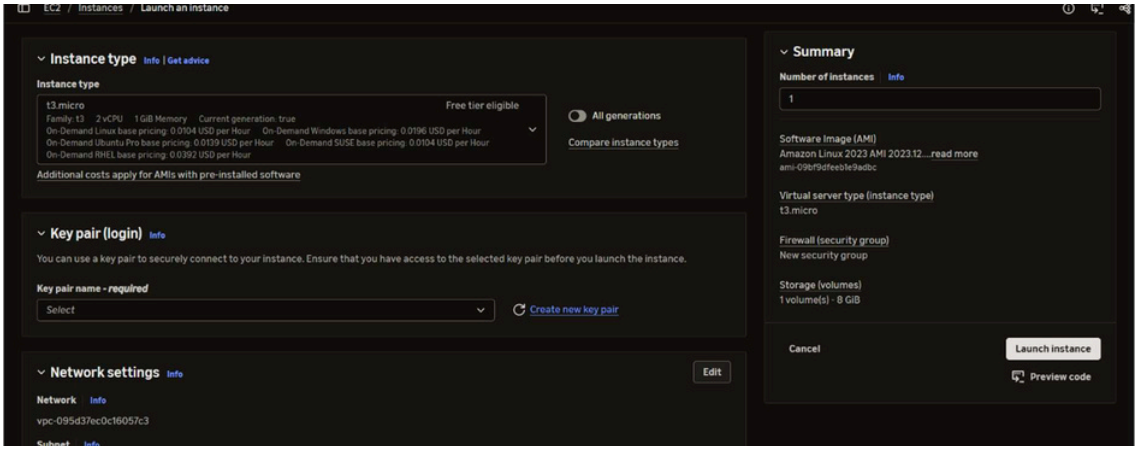

Search EC2: Searching for and selecting the EC2 (Virtual Servers in the Cloud) service in the top navigation bar.

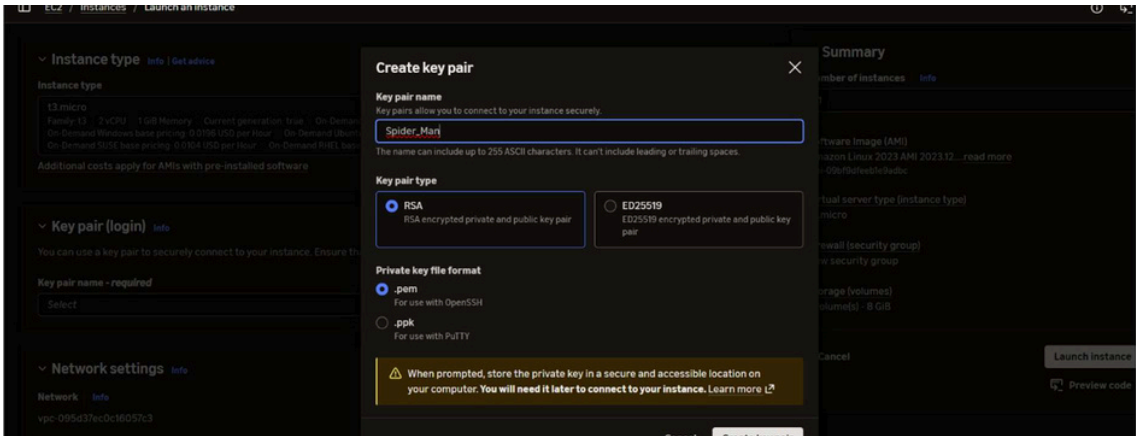

EC2 Instances Dashboard: Viewing the EC2 Instances dashboard and clicking Launch instances to create a new virtual server

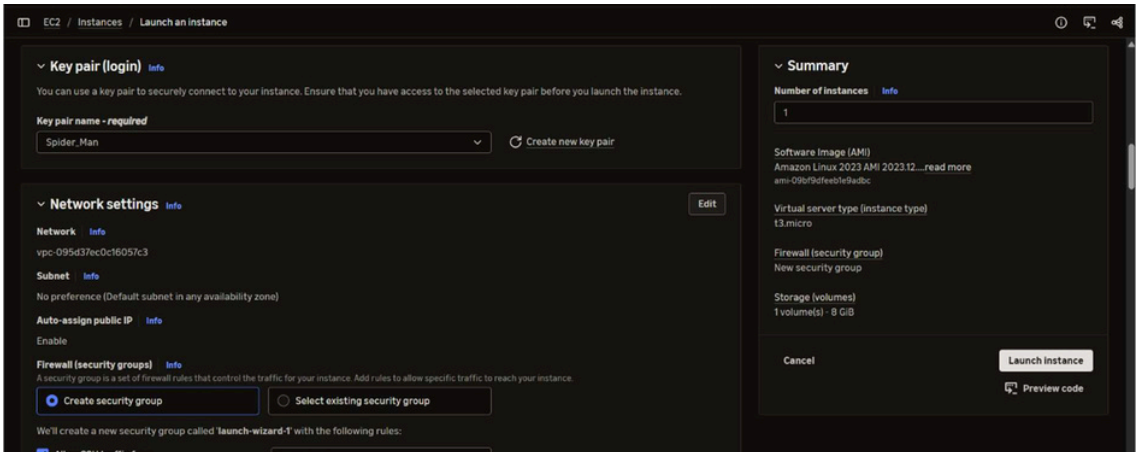

Name & AMI Selection:Naming the instance Ramayana_Legend and selecting the Amazon Linux 2023 AMI

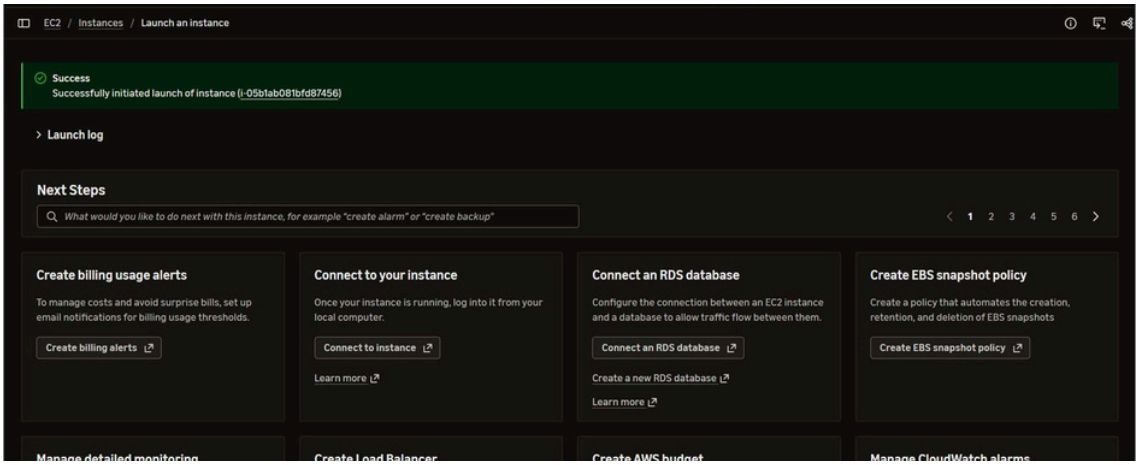

Instance Type & Key Pair Section: Selecting the Free Tier eligible t3.micro instance type and preparing to configure a login key pair.

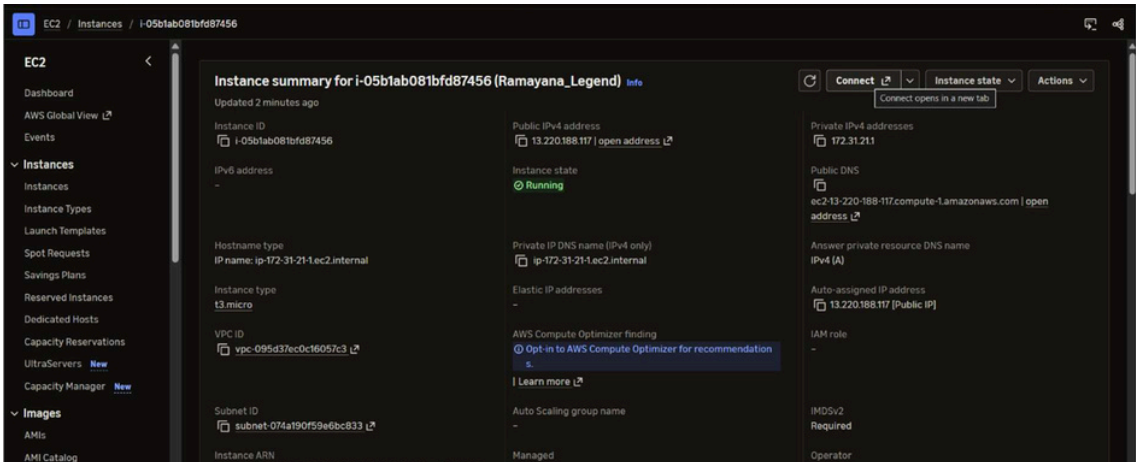

Create Key Pair:Creating a new RSA .pem key pair named Spider_Man for secure SSH access.

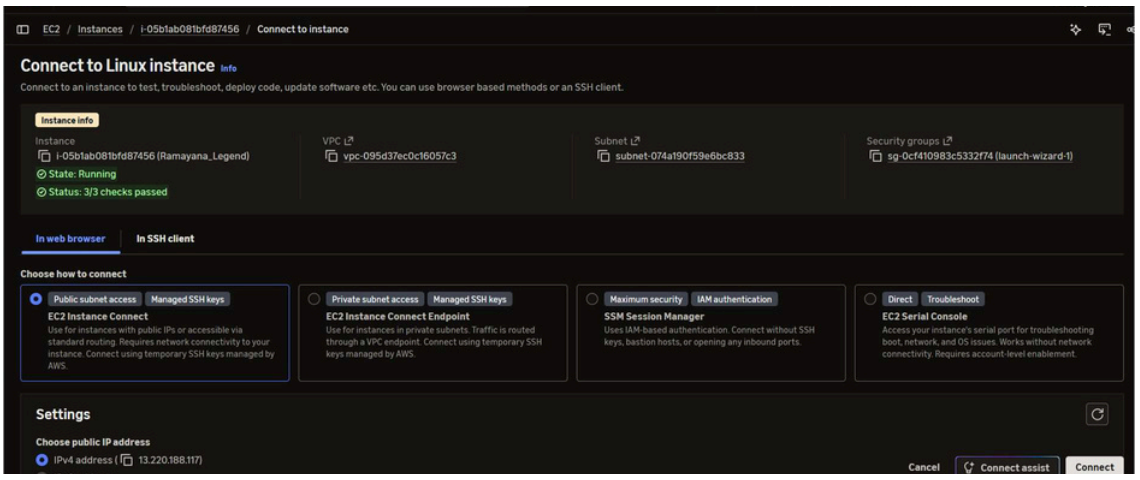

Network & Firewall Settings: Assigning the Spider_Man key pair and configuring a new security group (launch-wizard-1) to allow SSH traic.

Instance Launch Success: Confirming the successful launch initiation of EC2 instance i -05b 1a b081bfd874 56

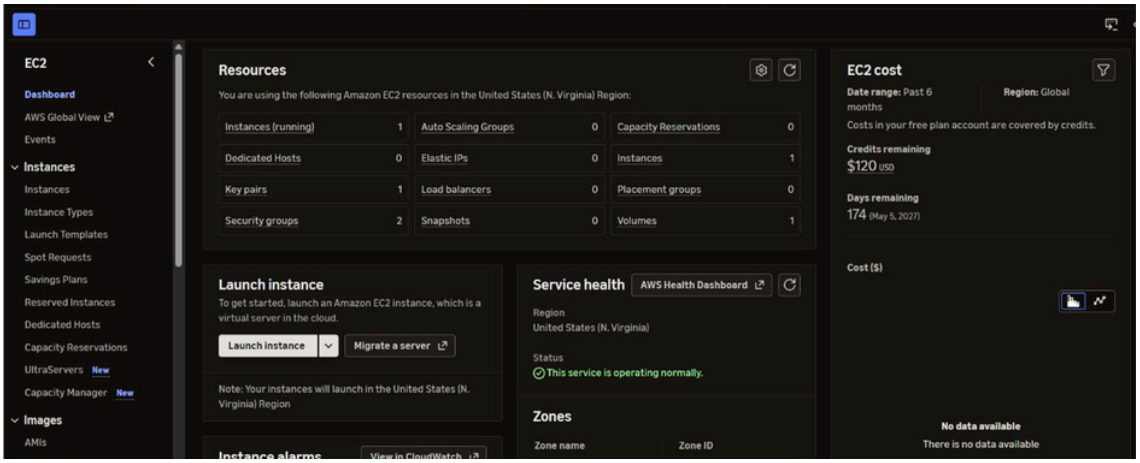

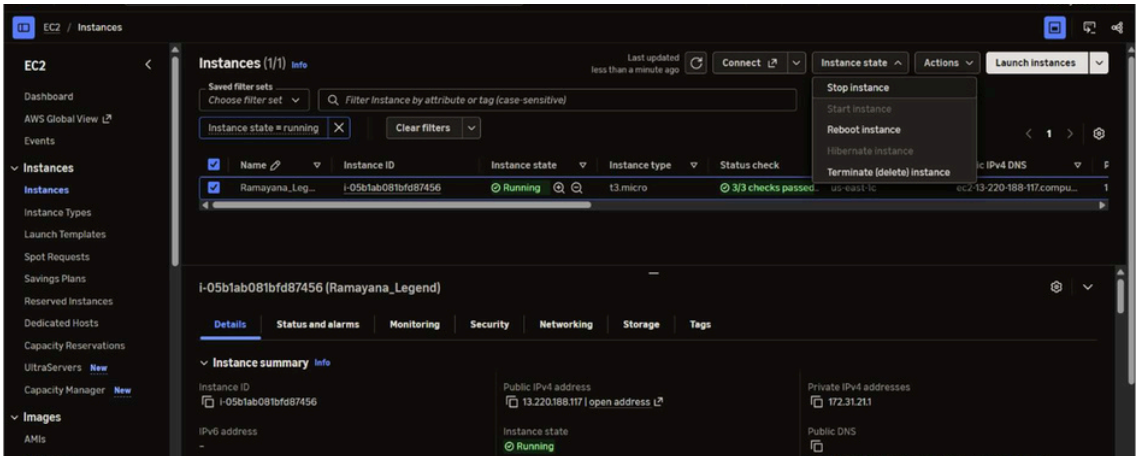

Connect to Linux Instance: Choosing EC2 Instance Connect in the web browser to establish a terminal session

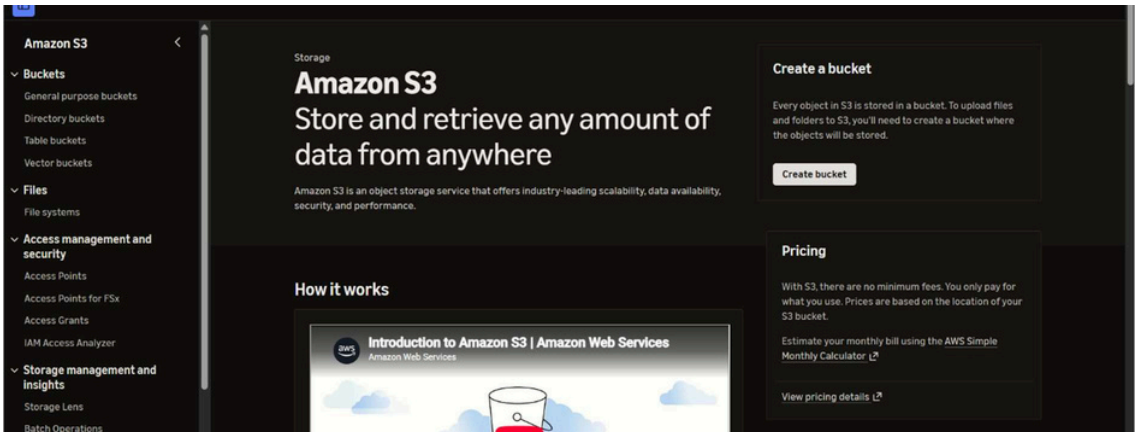

Linux Terminal Commands: Connecting to the Amazon Linux 2023 shell and verifying functionality by creating a test directory (mkdir test) and reading a text file (vi and cat file.txt).

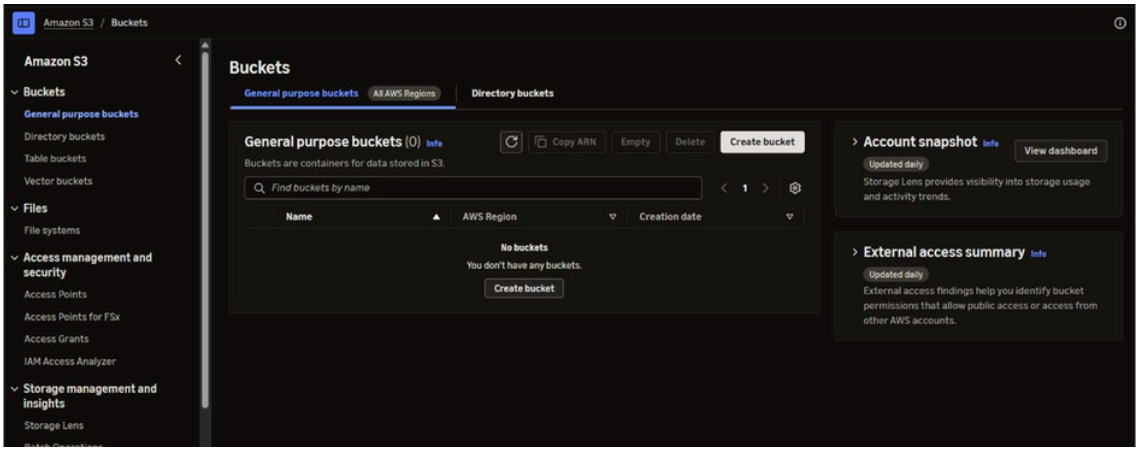

Instance State Management: Viewing the running instance with 3/3 checks passed and opening the Instance state menu (Stop, Reboot, Terminate).

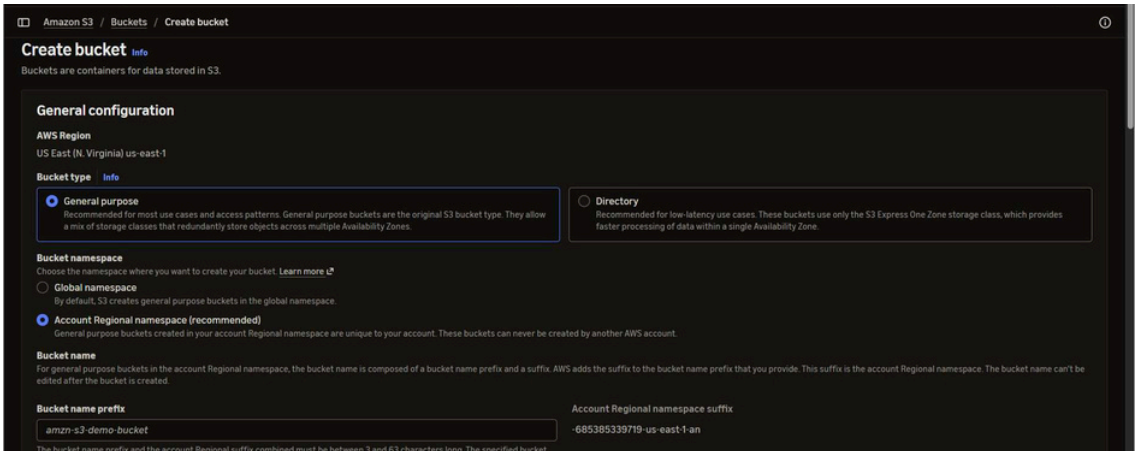

2c) S3 Bucket Creation and Upload Objects
I. Create an S3 Bucket for file storage.
II. Upload 5 objects with dierent file extensions.

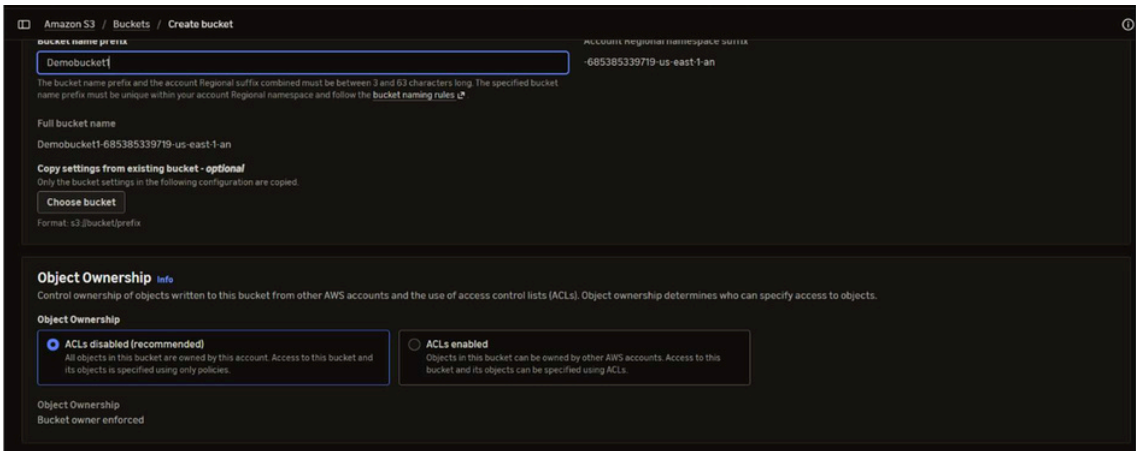

Amazon S3 Landing Page:Opening the Amazon S3 console and clickingCreate bucket

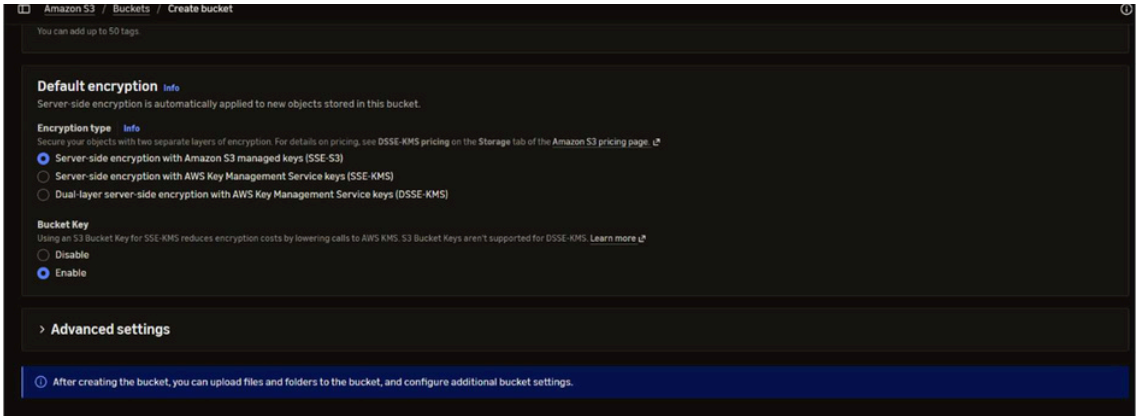

S3 Buckets List: Viewing the General purpose buckets dashboard before creating a bucket.

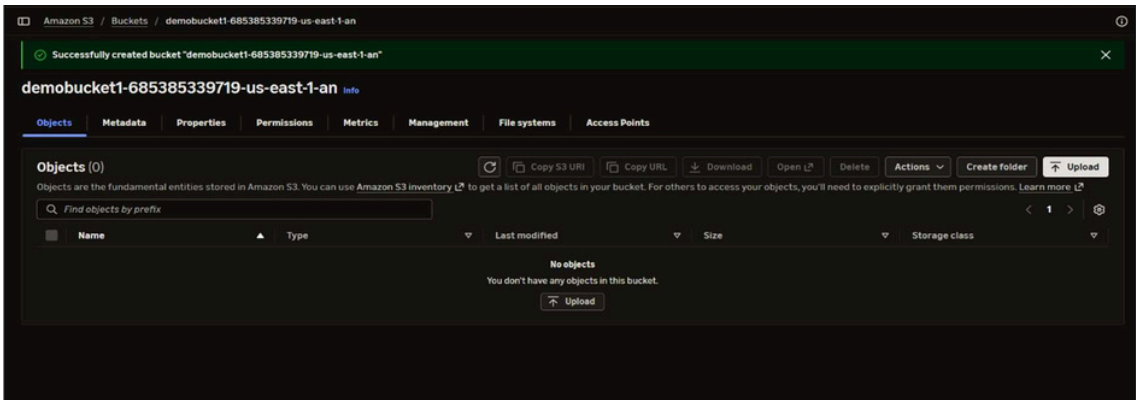

Create Bucket (Region & Namespace):Selecting the us-east-1 region,General purposebuckettype,andAccountRegional namespace.

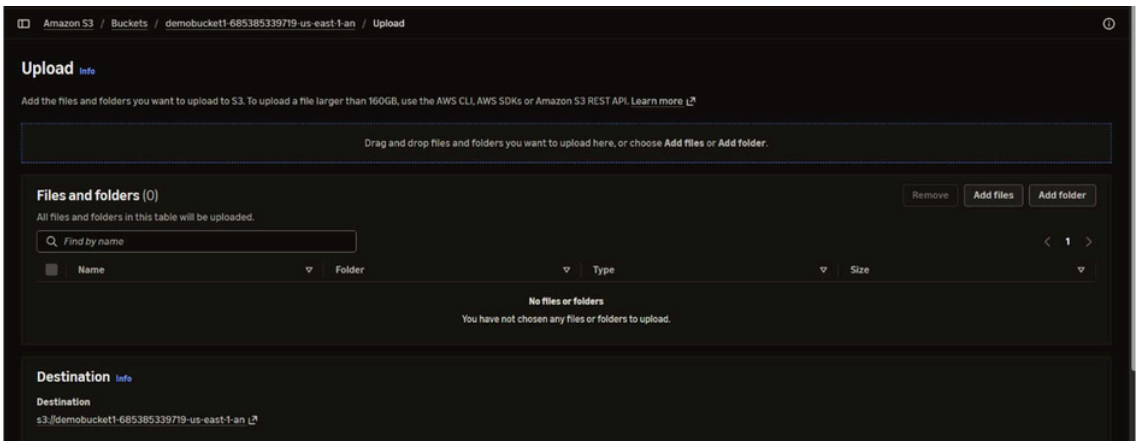

Bucket Naming & OwnershipNaming the bucket demobucket1-685385339719-us-east-1-an and keeping ACLs disabled (recommended)

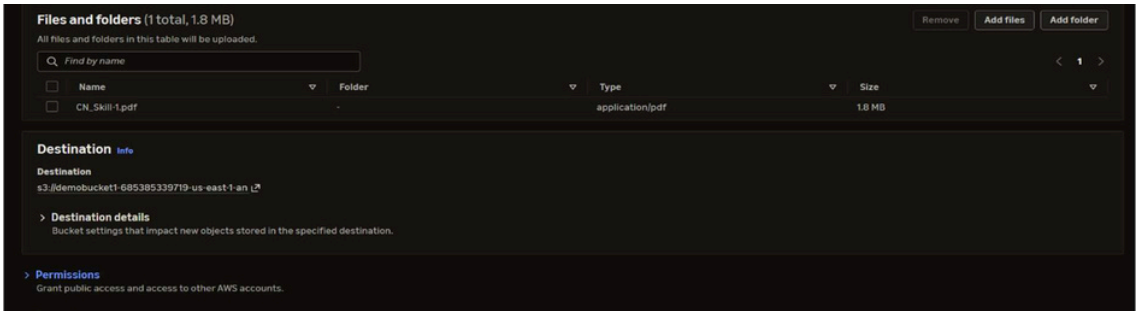

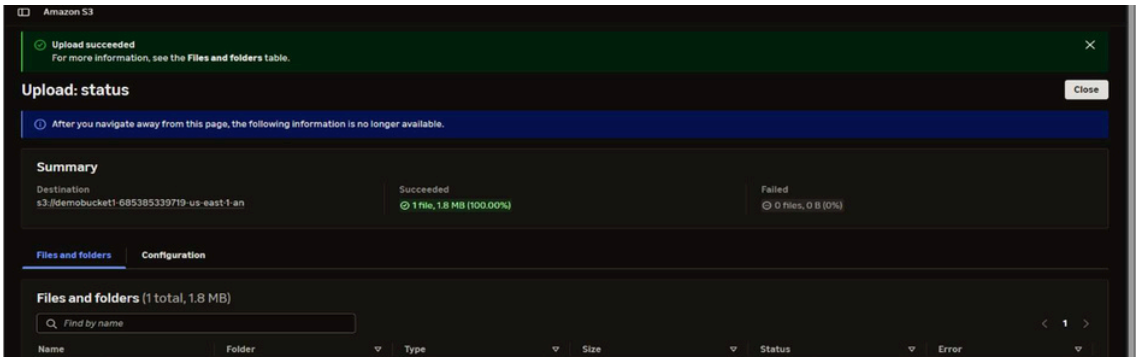

Bucket Created Confirmation: Confirming successful creation of demobucket1-685385339719-us-east-1-an and clicking Upload

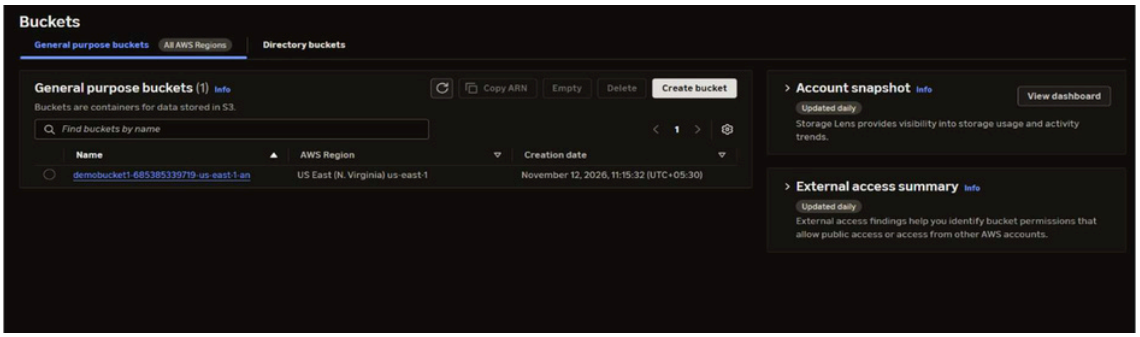

S3 Upload Interface:Opening the upload screen for the destination bucket

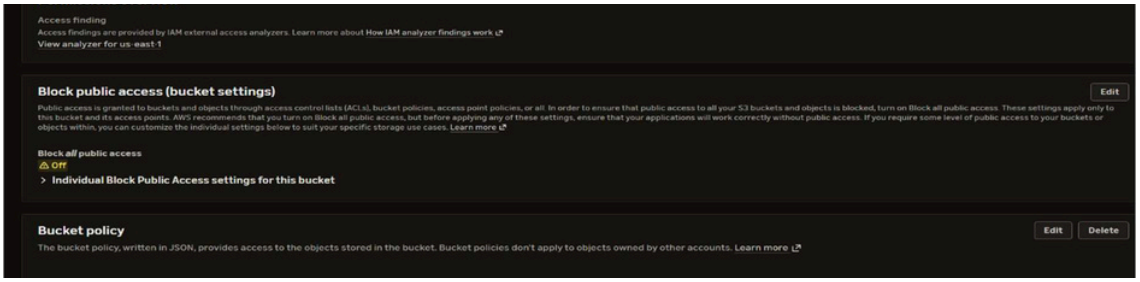

Adding File for Upload:Selecting CN_Skill-1.pdf (1.8 MB) to upload into the S3 bucket.

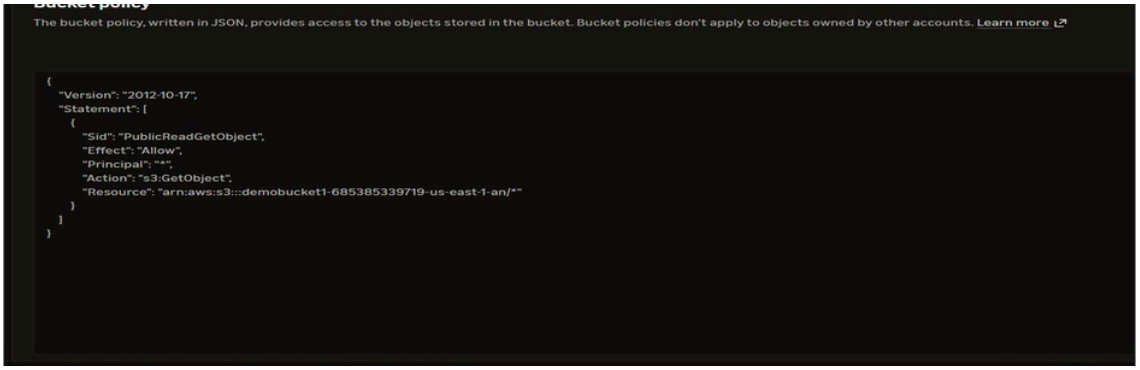

Upload Status Succeeded: Confirming that CN_Skill-1.pdf uploaded to the S3 bucket with 100% success.

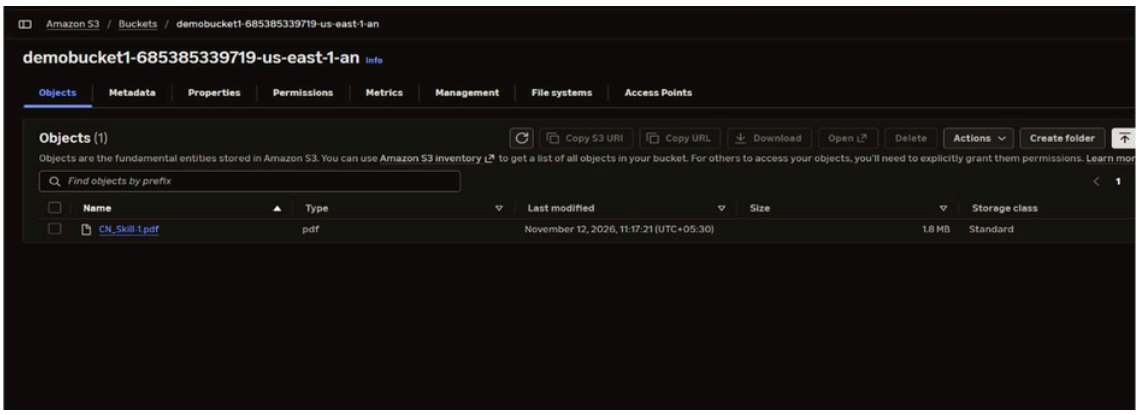

Buckets Overview: Verifying the newly created bucket listed under General purpose buckets (1)

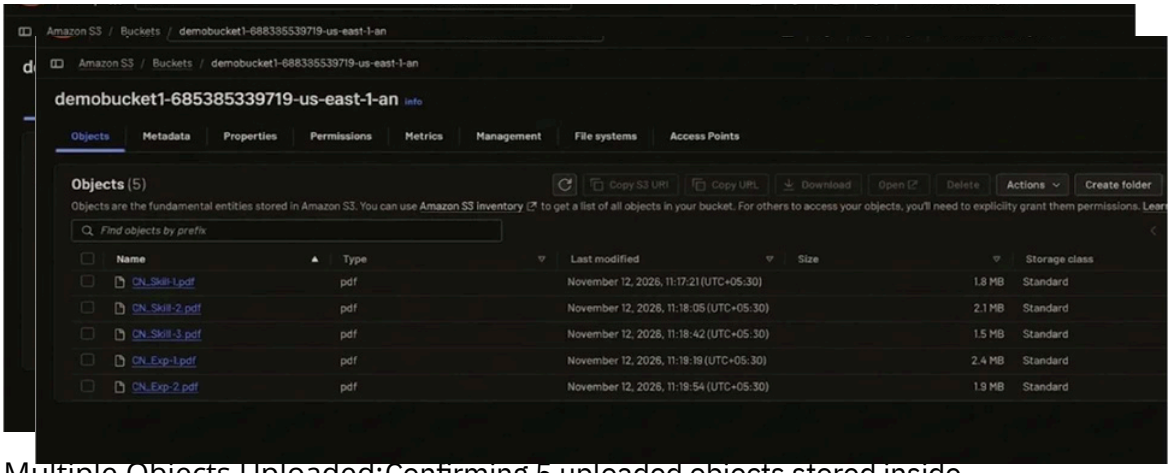

Permissions (Block Public Access): Turning o Block all public access under the bucket's Permissions tab to allow public object access

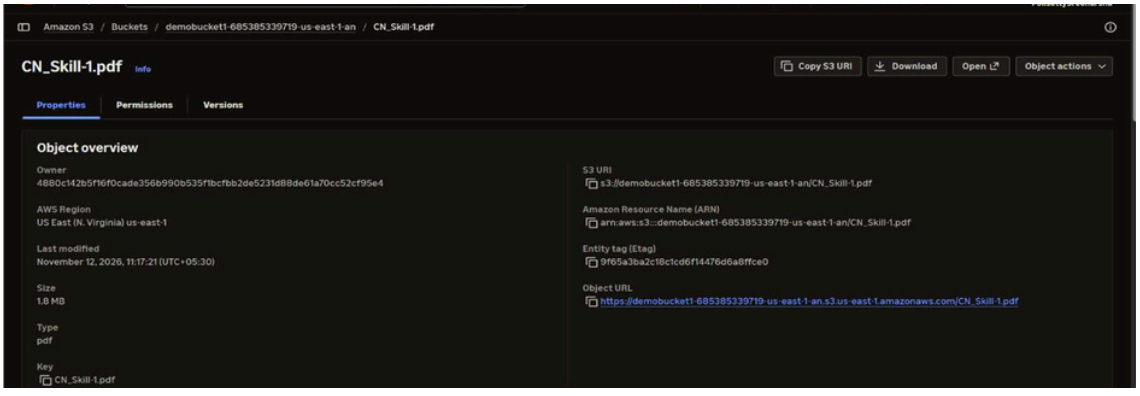

Bucket Policy Configuration: Adding a JSON bucket policy (PublicReadGetObject) granting public s3:GetObject read permissions to all objects in the bucket.

Multiple Objects Uploaded:Confirming 5 uploaded objects stored inside

Object Overview & Public URL:Opening CN_Skill-1.pdf properties to copy its public Object URL
