Experiment -1

AIM: To create an AWS free tier account to provision the resources.

Description:

AWS (Amazon Web Services) is a cloud computing platform that provides various services such as computing, storage, networking, and databases over the internet. It enables users to access and manage computing resources without maintaining physical hardware.

The AWS Free Tier allows users to explore and use selected AWS services within specified usage limits. It helps beginners understand cloud computing and gain practical experience with AWS services. By creating an AWS account, users can access the AWS Management Console and provision cloud resources based on their requirements.

Steps:

- Open a web browser
- Click on Create an AWS Account.
- Enter your email address and AWS account name.
- Verify your email using the OTP received.
- Create a secure password for your AWS account.
- Enter your personal details, contact number, and address.
- Select the account type as Personal.
- Complete the required identity verification process.
- Select DigiLocker for identity verification, if prompted.
- Log in to DigiLocker using your registered mobile number or credentials.
- Give permission to share the required identity documents for verification.
- Complete the remaining AWS verification steps.
- Add the required payment details.
- Select the Basic Support – Free plan.
- Complete the account registration process.
- Open the AWS Management Console and sign in using your registered email and password.

- The AWS Management Console dashboard will appear, where you can access and provision cloud resources.

Output:
