CDIS

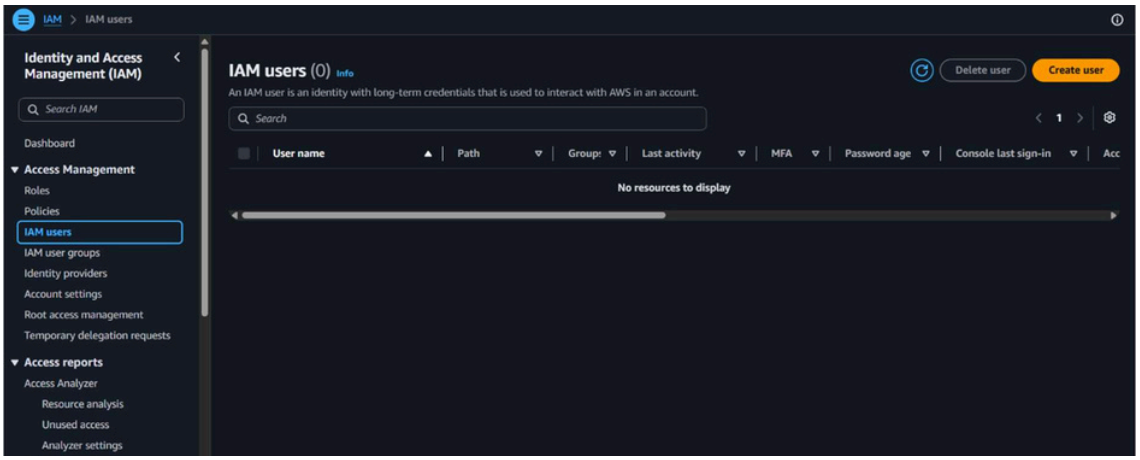

1. Create an IAM user with programmatic access only, download the access key and secret key, and document the steps with screenshots.Then set up a billing alert for the account so that an email is received when the Free Tier limit is about to be crossed.

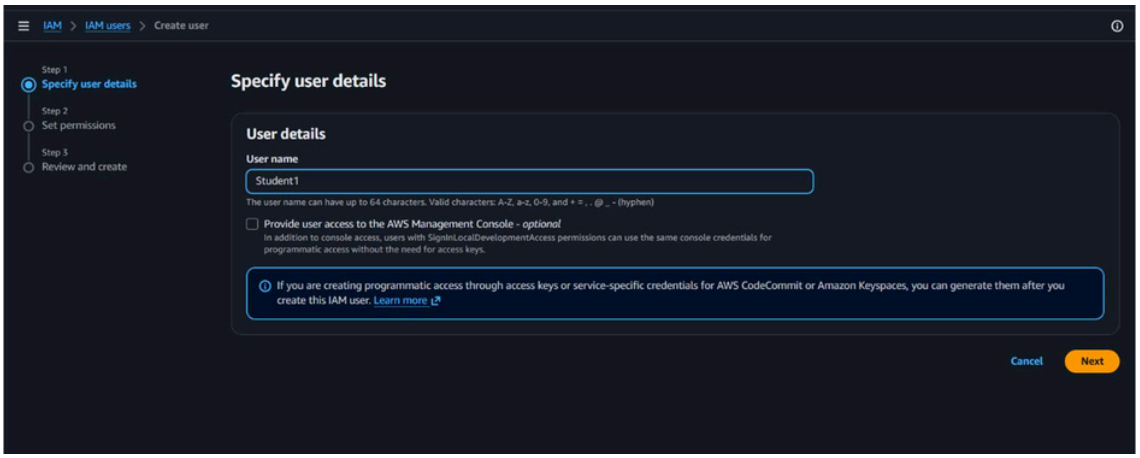

Access the AWS Management Console landing page. Navigate to the search bar or select IAM under Recently visited services.

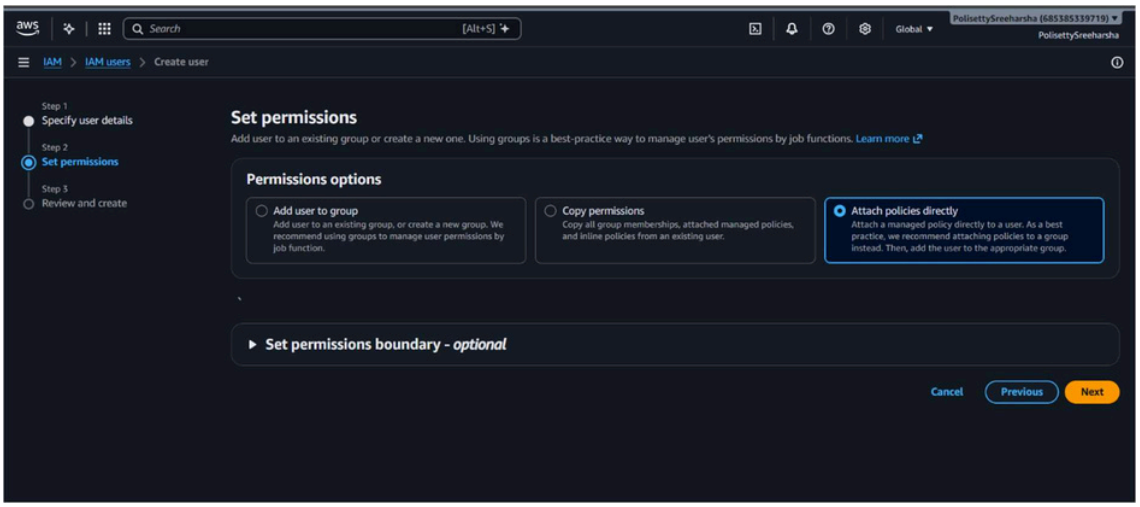

Open the IAM Dashboard Click on IAM users from the left-hand navigation pane under Access Management

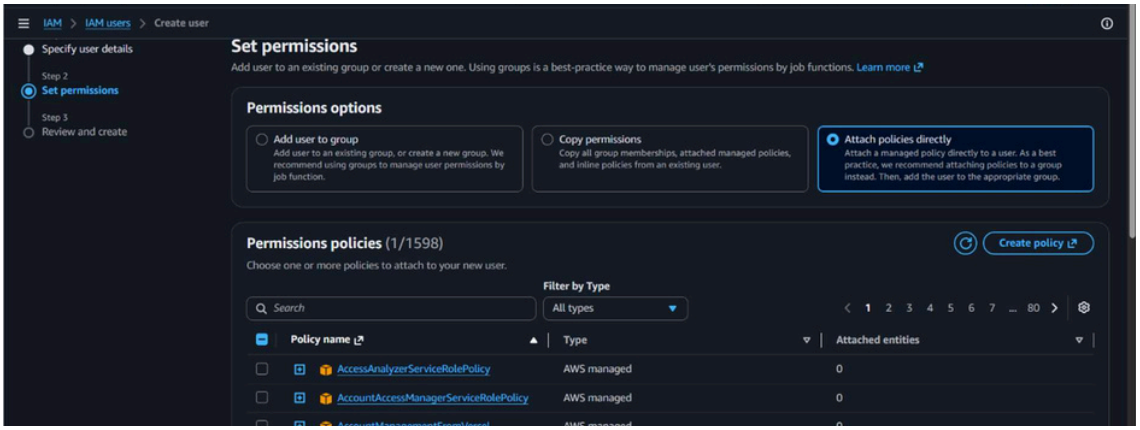

View the current list of IAM users. Click the **Create user** button at the top-right to start adding a new user.

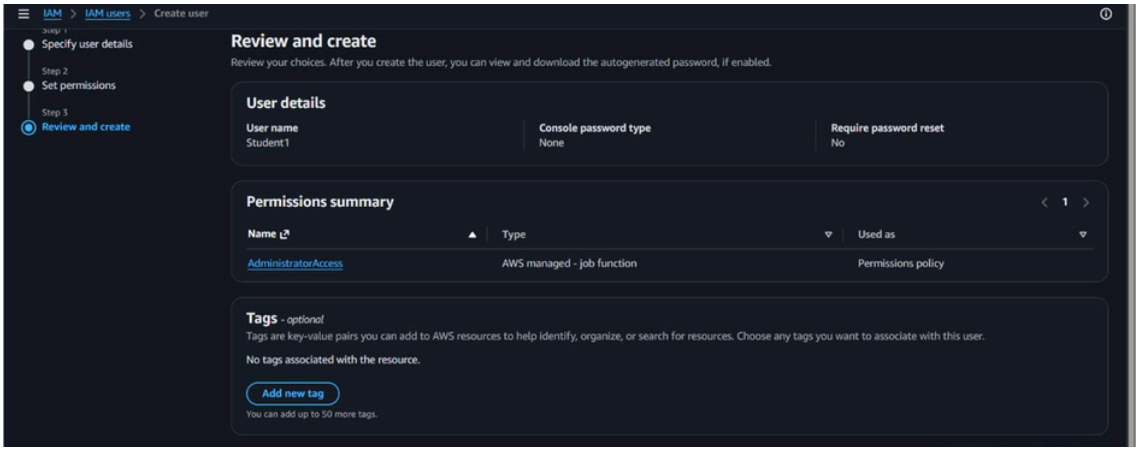

Enter the user name as **Student1**. Leave the box for **Provide user access to the AWS Management Console** unchecked to create a programmatic user initially. Click **Next**.

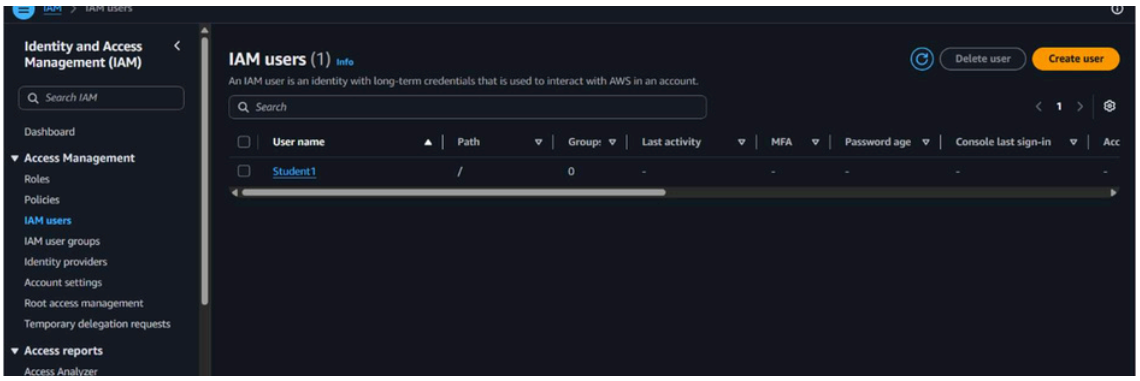

Select Attach policies directly under Permissions options to grant permissions to the user

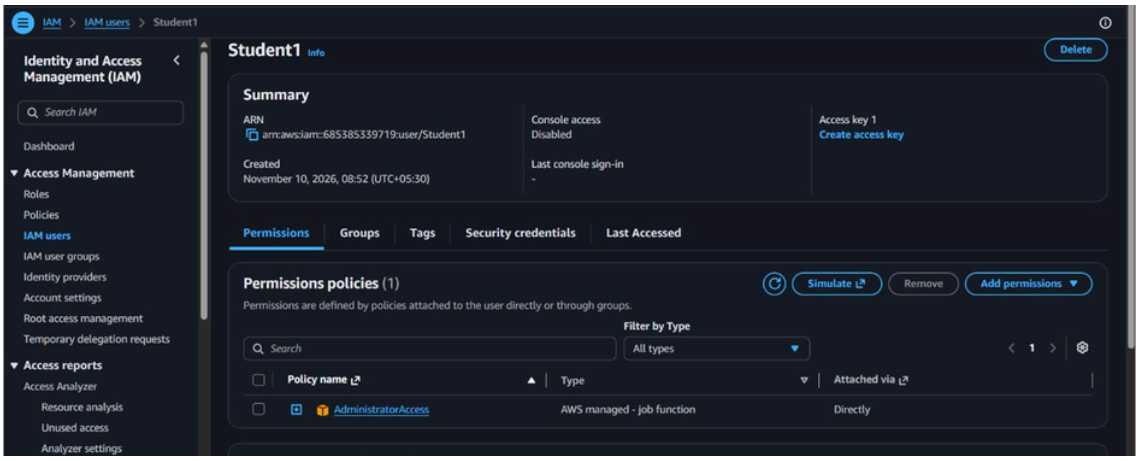

Search for and check the box next to AdministratorAccess from the Permissions policies table. Click Next.

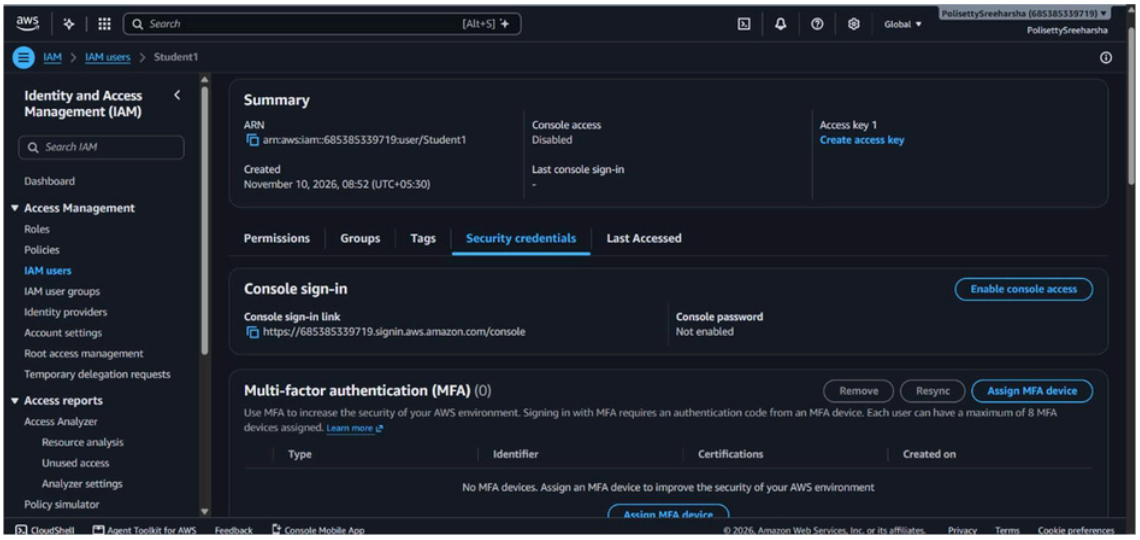

Review the configured user details (Student1) and attached permissions policy (AdministratorAccess). Click Create user.

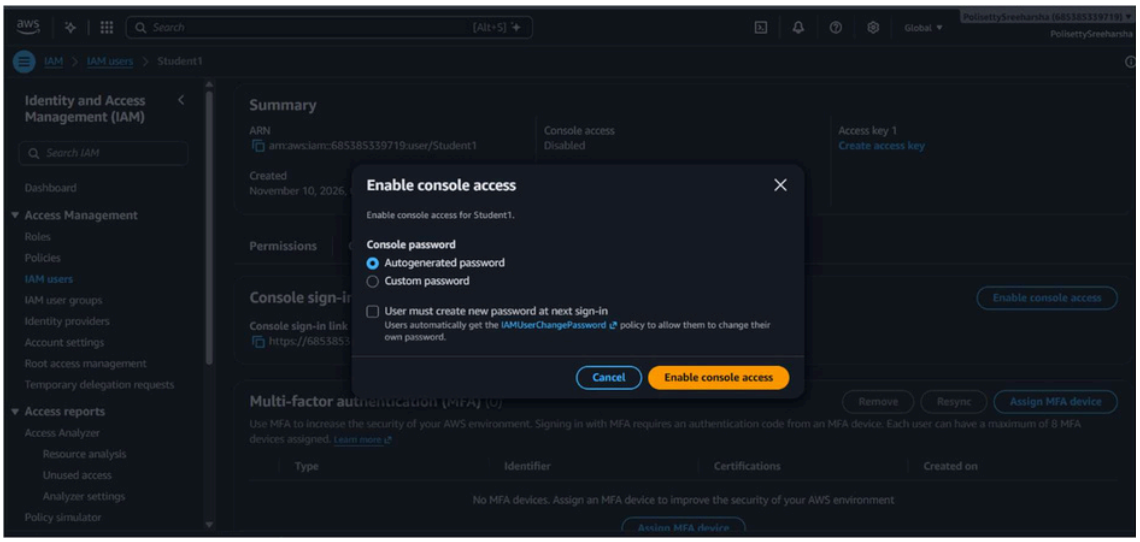

Verify that Student1 is successfully created and displayed in the IAM users list. Click on Student1 to open the user details page.

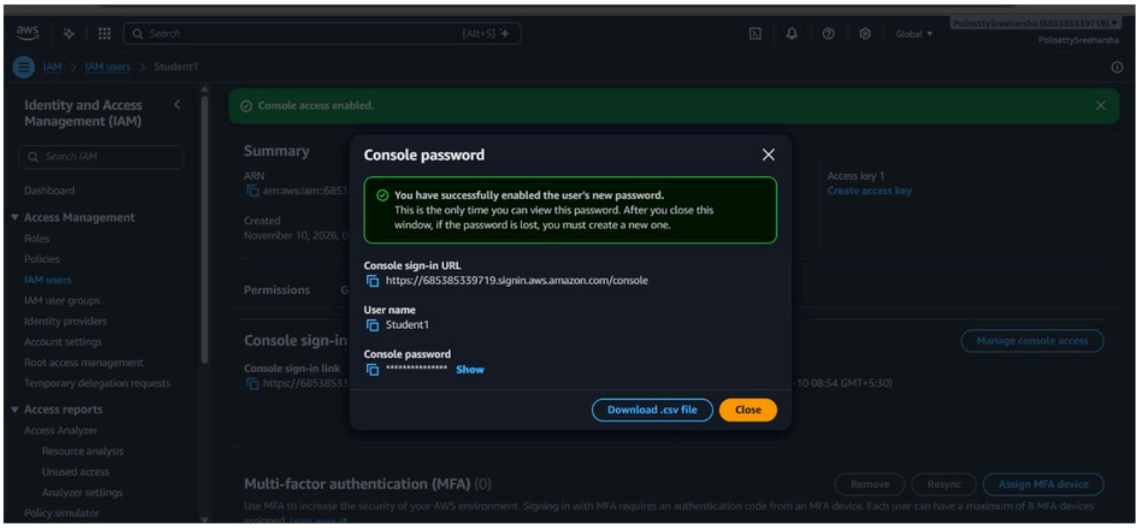

View the Student1 details page confirming attached policies. Click on the Security credentials tab.

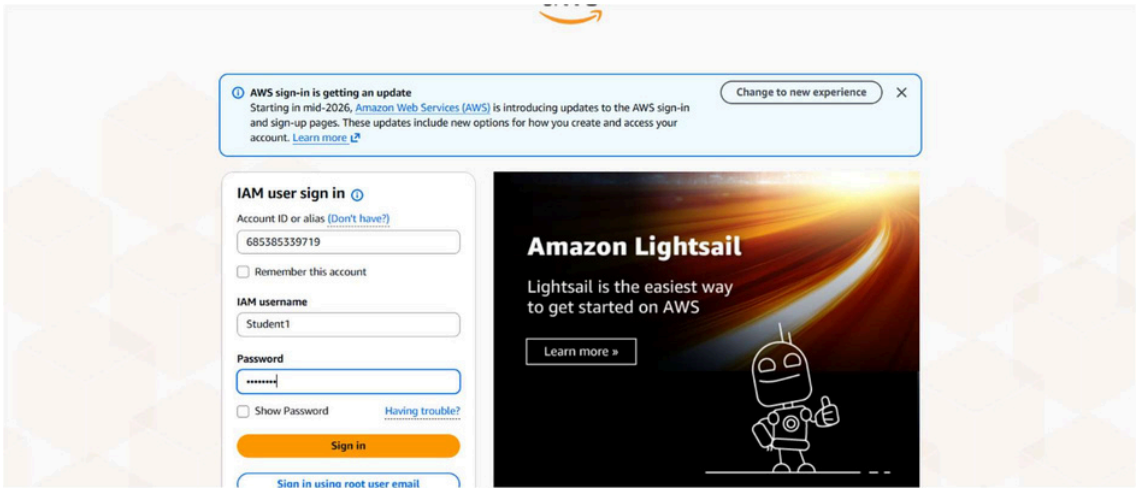

Locate the Console sign-in section under Security credentials. Click Enable console access to enable console password login for testing.

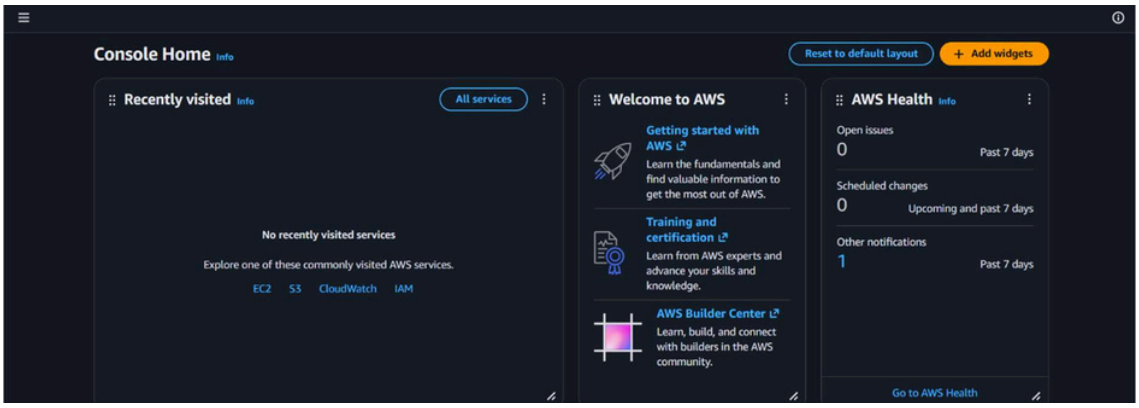

Select Autogenerated passwordand clickEnable console access.

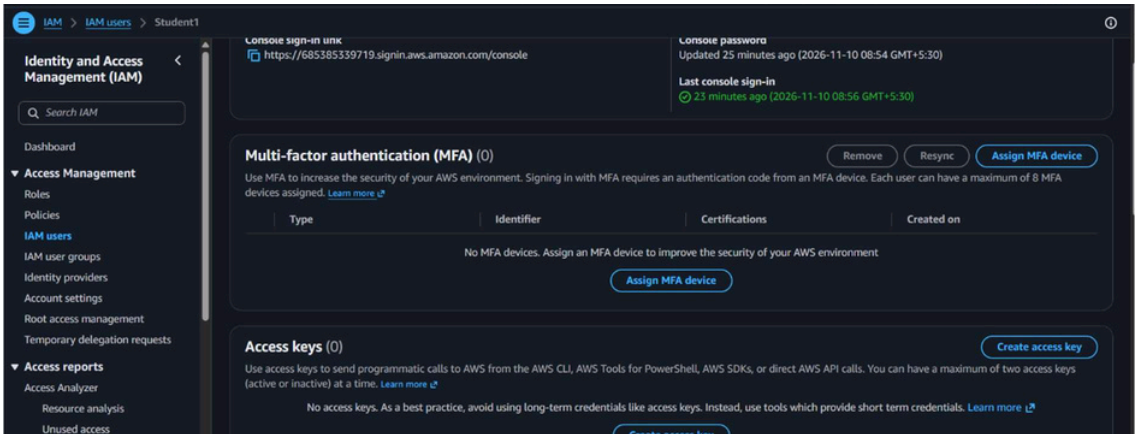

View the generated console sign-in URL, username, and autogenerated password. Click Download .csv file to save credentials, then click Close.

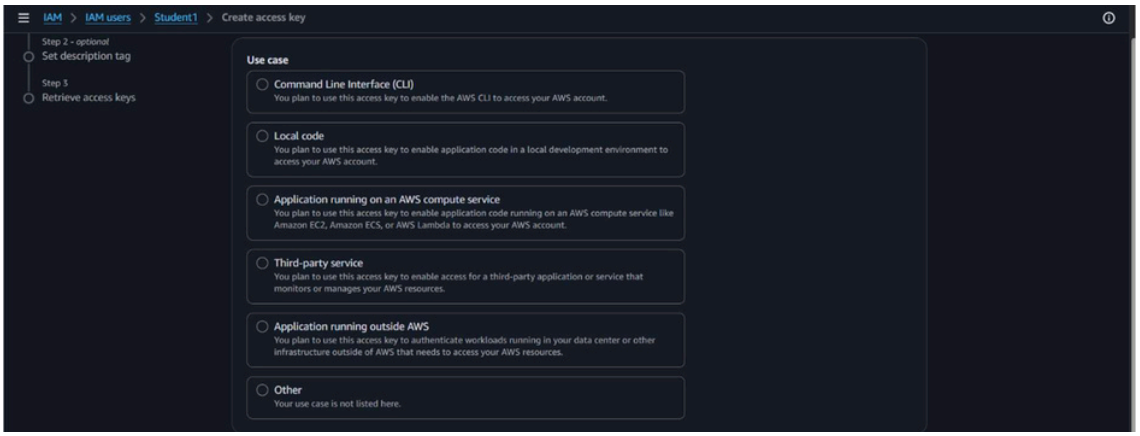

Open the AWS Console sign-in page using the Account ID/Alias, enter Student1 as the IAM username along with the password, and click Sign in.

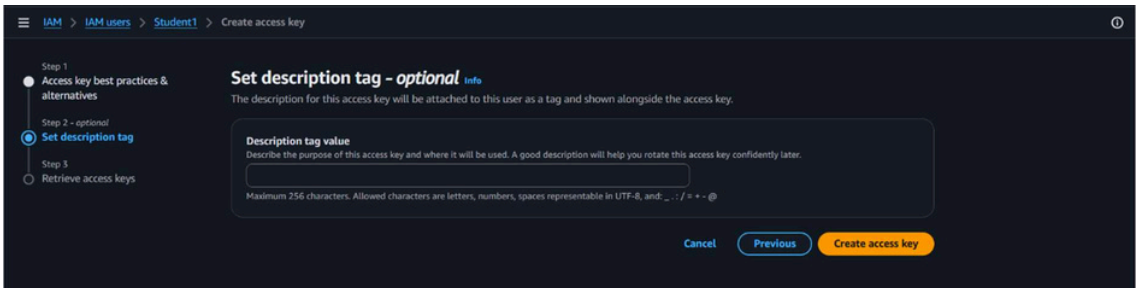

Confirm successful login as Student1 by checking the user identity at the top-right corner of the AWS Console

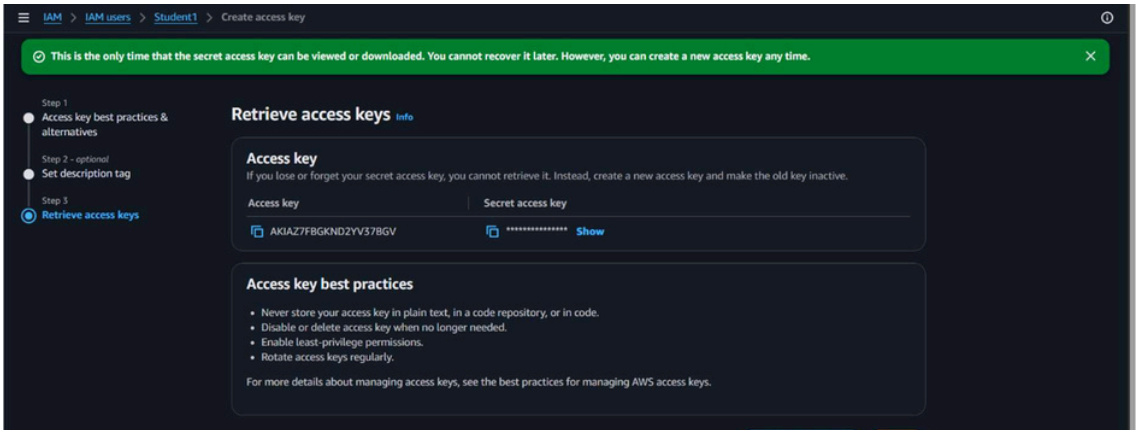

Return to IAM>IAM users > Student1 > Security credentials tab. Under the Access keys section, click Create access key.

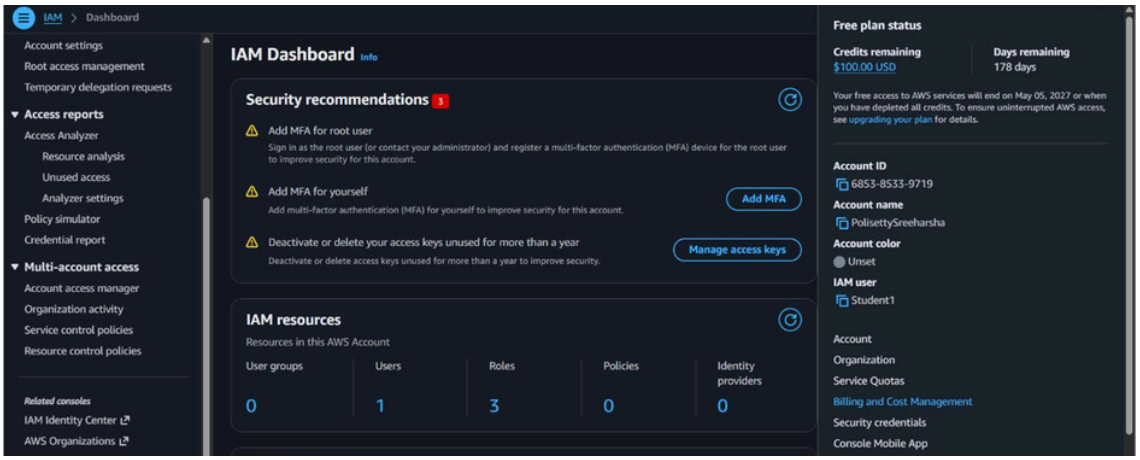

Select the intended use case (e.g., Command Line Interface (CLI) or Other) for programmatic access. Click Next.

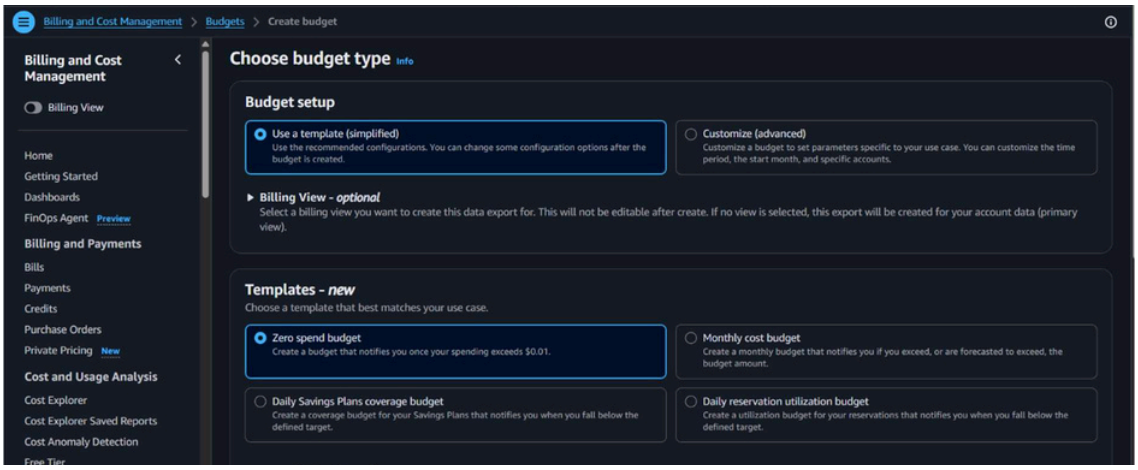

Optionally add a description tag to describe the purpose of the key, then click Create access key

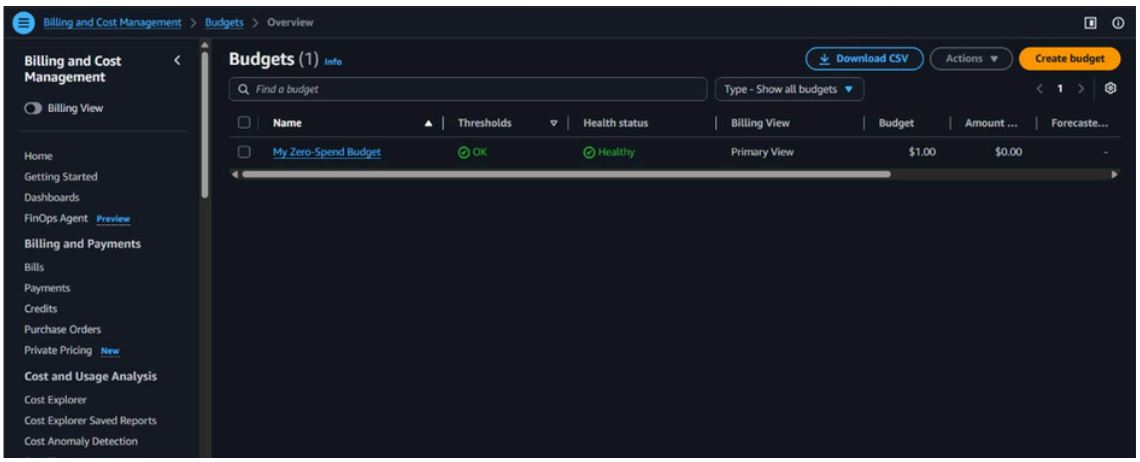

Display the generated Access key ID and Secret access key . Click Download .csv file to securely store the credentials, then click Done.

Navigate to Budgets, click Create budget, choose Useatemplate (simplified) , select Zero spend budget, and configure recipient email alerts.

Verify that the My Zero-Spend Budget is active with Healthystatus, successfully configuring alerts to notify when spending exceeds $0.01.
